EXPERIENCE

Clio *Toronto, ON*

Data Engineering Intern **May 2026 – Dec 2026**

- Raised **observability coverage from 14% to 100%** across 7 services by defining **Datadog** alerting standards and authoring reusable Claude Code skills that manage monitors and dashboards in **Terraform**.
- Build and maintain production **Databricks Delta Live Tables** pipelines in PySpark that ingest third-party vendor data through a **medallion architecture**, serving analytics-ready tables to data insights, ML, and analyst teams.
- Provisioned a restricted **Databricks** workspace in Terraform for PII-sensitive headcount-planning data, enforcing workspace and **Unity Catalog** permissions, service-principal authentication, and automated dbt credential rotation.

nAIber – AI Voice Companion for Elderly Care *Ottawa, ON*

Co-founder & Lead Engineer **Dec 2025 – Present**

- Architected a **TypeScript** and Node.js microservices monorepo for real-time voice AI phone calls, streaming bidirectional audio between Twilio and ElevenLabs over **WebSockets** with **~800 ms** response latency.
- Redesigned the dialogue engine from scripted Q&A into an **event-sourced** architecture on **Redis**, letting the AI hold natural, open-ended conversations that adapt to what the user said earlier in the call and in past sessions.
- Developed a memory layer where a **LangGraph** post-call pipeline extracts facts into a vector database and Neo4j knowledge graph, and **RAG** ranks them by fused similarity and graph scores for relationship-aware context.

theScore *Toronto, ON*

Data Scientist Intern **Sep 2025 – Dec 2025**

- Improved early detection of **high-risk users by 10%** over the heuristic baseline, clustering betting behavior with **K-Means** in **scikit-learn** and validating against long-term risk scores.
- Feature-engineered **20+ behavioral signals** from **500K+ betting transactions**, including promo-to-deposit ratios, bonus capture rates, and straight-vs-parlay mix, to flag promotion-dependent users within their first week.
- Implemented a **Python** and SQL ETL workflow on **BigQuery** that turned raw betting data into inputs for the risk-segmentation model determining users' promotional bonus eligibility.

Software Engineer Intern **May 2025 – Aug 2025**

- Cut model deployment validation from **2 days to 1 hour** by integrating a FastAPI service into the **CI/CD pipeline**, automating accuracy, latency, and consistency checks on every model before release.
- Extended CI/CD validation with end-to-end verification of the account-linking event flow, driving synthetic user events through REST APIs and **Kafka**, then reconciling them against **MongoDB** source-of-truth profiles.

LEADERSHIP

Carleton Blueprint – Technology for Nonprofits *Ottawa, ON*

VP of Projects **May 2026 – Present**

- Own client partnerships end to end as principal point of contact, sourcing and qualifying Ontario nonprofits, gathering requirements, and negotiating contracts for student-built software projects.
- Lead a team of **5 developers** rebuilding a nonprofit's website with a custom CMS and an internal operations app for managing form submissions, from technical discovery and solution design through delivery.

TECHNICAL SKILLS

Languages: Python, SQL, TypeScript, JavaScript, Java, C, C++
Backend & Web: Node.js, Express.js, Next.js, React, WebSockets, BullMQ
Cloud & DevOps: AWS, GCP, Terraform, Docker, Datadog, CI/CD, Jenkins
Databases: PostgreSQL, Neo4j, MongoDB, Redis, Qdrant
ML/AI: PyTorch, scikit-learn, pandas, NumPy, Jupyter, LangChain, LangGraph, RAG, Model Context Protocol (MCP)
Data Engineering: PySpark, Spark SQL, Databricks, Delta Live Tables, Unity Catalog, dbt, BigQuery, Kafka

EDUCATION

Carleton University *Ottawa, ON*

Bachelor of Computer Science (Honours), Minor in Statistics ***(GPA: 3.85/4.00)*** **Expected: Apr 2028**
